

SMART SPP LCC-CO₂ Tool Beta Version 1.4

Available at www.smart-spp.eu/guidance

Additional Notes

Updated: 24 March 2010

1. Macros must be enabled in order to use all functions of the Tool.
2. The tool does not calculate the life-cycle costs of a product with a lifespan lower than 1 year.
3. In the “Tenders Evaluation Sheet” data for the CO₂ emissions must have been included; otherwise the Tool cannot calculate the award criteria and most economically advantageous offer. Users that do not want to assess the CO₂ emissions for awarding the tender should include a percentage of 0% for the CO₂ emissions in the sheet.
4. If you are using Excel version 2007, the diagrams on the “CO₂_Diagrams” worksheet may not display correctly. The CO₂ results presented on the “General” worksheet (Row 92 onwards) are however accurate.
5. Until 20 March 2010, Version 1.3 of the Tool was available from this website. Some small errors were detected which affected the calculation of the Operation Costs. These have now been rectified in the new version (Version 1.4) available now from this website. Please note that Version 1.4 is still a beta version which is currently being trialed.
